

Nucleus is **neutral** as far as interface request from customers. Nucleus sends and receives data through practices' third party systems at no cost to the customer. That is, Oncology Supply provides its integration services free of charge, though the practice may incur costs from other vendors involved in the interface.

## 4 Types of Interfaces

**ADT**—Receives Patient demographic information from the PM system.

**Charge**—Sends Patient charge records to the billing software to be processed to the payer.

**EMR**—Receives Patient orders (MAR) to dispense and charges to the Patient.

**SIU**—Receives scheduling information from EMR or PM system.

Nucleus is currently interfaced with **25+ vendors** with the ability to design compatible interface functionality at your request!

After Nucleus dispenses and records items utilized, the Medical Activity Records (MAR) are updated to reflect usage within the EMR.

PM System	Receive ADT	Send Charges	EMR System	Receive Med Orders	Update MAR
